Re: RoHs

The RoHs directive, which came into effect in July 2006, is designed to limit six dangerous chemicals – lead, mercury, cadmium, polybrominated biphenyl flame retardants, hexavalent chromium, and polybrominated diphenyl ether flame retardants in consumer products. Products that are affected include: electronic and electrical tools, automatic dispensers, light bulbs, and lighting equipment, household appliances, consumer electronics (e.g radio sets, television sets, video cameras, video recorders, hi-fi recorders, audio amplifiers, and musical instruments), telecommunication equipment, sports equipment, toys and leisure products.

To the best of our knowledge, upon review of our company product specifications, DESTACO products are not considered affected products and do not contain any RoHs regulated substances in the levels that violate directive 2011/65/EU.

For further information on our company or products, please visit: <https://www.destaco.com/>
